Forgotten Books. Paperback. Condition: New. This item is printed on demand. 188 pages. Dimensions: 9.0in. x 6.0in. x 0.4in.Excerpt from Physiological PsychologyIt is now generally recognized that all students of the mind should have some knowledge of the structure and functions of the nervous system. Unfortunately it is not usual, and in many cases it is not possible, for students of psychology to make that thorough study of the nervous system which is desirable, and even those of them who are fortunate in this respect find some difficulty in bringing their physiological and anatomical knowledge into relation with that which they acquire by the study of works on psychology. The writer of this little book has therefore sketched in broad outlines the structure and principles of action of the nervous system and, assuming on the part of his readers some acquaintance with the general principles of psychology, has endeavoured to show how each of these two bodies of doctrine, the physiological and the psychological, supplements the other, deepening our insight into the processes that result in the actions of men and animals, and how the conjunction of the two kinds of research brings before us a number of problems of the deepest interest that remain hidden so long as we confine our attention to one or other of these sciences. These are the problems of the infant science of psycho-physics, the science that investigates the relation of body and soul. About the PublisherForgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.comThis book is a reproduction of an important historical work.
