Excerpt from Machine Design: A Manual of Practical Instruction in Designing MachineryMachine Design is a subject which is often neglected by men who have the ambition to graduate from the drafting and machine work of our factories into the more important departments dealing with the design of tools and machines, and the numerous devices which are made by means of them. The draftsman is liable to forget that, in order to be a really good draftsman, he must add to his ability to draw objects the power of visualizing accurately the device or machine, the different views of which he is called upon to draw, and be a good enough mechanic to know how things work and how the machine is to be manufactured. Similarly, the machinist is liable to lose sight of the fact that he is all the better workman if he can couple with his skill in turning out the finished product machined to the proper size, the ability to read the draftsman's drawings down to the smallest detail and to know the why and wherefore of every element...
