

## Photocatalytic Degradation of Amaranth Dye

Filesize: 7.39 MB

### ***Reviews***

*It is one of the best publications. It is definitely simplistic but exciting in the 50 % of the ebook. I am very happy to let you know that this is basically the greatest publication I have ever gone through within my own existence and could be the greatest pdf for ever.*  
(Dr. Anya McKenzie)

## PHOTOCATALYTIC DEGRADATION OF AMARANTH DYE

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Concept and Methods | The treatment of highly colored wastewater containing hazardous industrial chemicals and dyes is one of the growing needs of the present time. The conventional wastewater treatment does not always satisfactorily cleanse the wastewater containing dyes. In order to cleanse water of these extra-stable organics, so-called advance oxygen processes (AOPs) have been developed. The aim of these methods is to mineralize the pollutants to CO<sub>2</sub>, H<sub>2</sub>O and mineral acids and salts. Titanium dioxide photocatalysis belongs to the group of AOPs and has been extensively studied over the last 20 years. The use of TiO<sub>2</sub> as slurries in wastewater treatment has some disadvantages: the separation of fine particles is slow and penetration of light is limited. These problems can be minimized by supporting TiO<sub>2</sub> on various materials. The goals of present work were: (1) preparation of immobilized TiO<sub>2</sub> films by various techniques and their characterization; (2) study the photocatalytic degradation of aqueous amaranth solution using the prepared TiO<sub>2</sub> films; (3) study the combined effect of photodegradation and adsorption; (4) comparing the performance of prepared films. | Format: Paperback | Language/Sprache: english | 76 pp.
